

ABSTRACT

An object of this invention is to provide a portable charger for a mobile phone. The portable charger includes a main body, a rechargeable battery, an accessory unit, and an earphone unit. The main body has a cradle on a predetermined portion thereof so that the mobile phone is seated in the cradle. The rechargeable battery is provided in the main body to be charged by electric power supplied to the portable charger. The accessory unit supports the main body in such a way that a user carries the portable charger. The earphone unit is provided to be drawn out from the main body. The portable charger is constructed to allow a user to carry, thus being available regardless of time and place. Further, the portable charger has a rechargeable battery therein, thus allowing a mobile phone to be charged without the supply of electric power, and allowing a user to make a call and listen to music using the audio function of the mobile phone even when the mobile phone is being charged.
